Children's games for every taste

Collecting pictures in a puzzle in a certain period of time is not a difficult and very interesting task. This game can develop attentiveness and logical thinking.

Coloring pages will give every child the opportunity to create their own masterpieces, independently making decisions when choosing colors and their combinations. This game will help you develop an aesthetic taste, the ability to choose the right colors and shades.

Arcade games for children are a whole story of the adventures of the elephant Pustunchik, the participants of which are the children themselves. Attention, concentration and speed of reaction - that's what is needed in order to win.

But the most important for the formation of the future personality are logic games for children online. On the "Pustunchik" children's portal, children can test their intelligence: go through the corridors of a confusing labyrinth or compete with the computer in tic-tac-toe. Such games interest and develop at the same time. Solving the next puzzle, you will be convinced once again: training your logical thinking can be fun, exciting and with a great mood!

Thus, on the portal you can find both simple children's games and developmental or arcade games for older children and even teenagers. Kids love online puzzles and bright coloring pages: with this activity, they will forget about everything in the world, experimenting and learning shapes, colors and shades. And arcade and logic games are very popular among school-age children: with them, attention, intelligence and dexterity are trained in the most exciting way.
